## PER.L44610

### Special single row tapered roller bearing, cup

These tapered roller bearing cups (outer ring) offer cost-effective solutions for applications operating at moderate loads, such as many agricultural applications. Combined with corresponding cones (inner ring with rollers and cage), they create a complete bearing that accommodates combined radial and axial loads and provides low friction during operation. By mounting one single row tapered roller bearing against another and applying a preload, a rigid bearing application can be achieved.

- Designed for moderate loads, like in many agricultural applications
- Can be combined with corresponding cones
- Enable full interchangeability of cups

Overview

Dimensions

Outside diameter	50.292 mm
Width, total	10.668 mm
Width, outer ring	10.668 mm

Properties

Bearing part	Outer ring (cup)
